1 GENERAL WARNING

1.1 PLEASE READ BEFORE USING THIS MANUAL

- This manual is part of the product and should be kept near the instrument for easy and quick reference.
- The instrument shall not be used for purposes different from those described hereunder. It cannot be used as a safety device.
- Check the application limits before proceeding.
- Dixell Srl reserves the right to change the composition of its products, even without notice, ensuring the same and unchanged functionality.

1.2 Safety Precautions

- Check the supply voltage is correct before connecting the instrument.
- Do not expose to water or moisture: use the controller only within the operating limits avoiding sudden temperature changes with high atmospheric humidity to prevent formation of condensation
- Warning: disconnect all electrical connections before any kind of maintenance.
- Fit the probe where it is not accessible by the End User. The instrument must not be opened.
- In case of failure or faulty operation send the instrument back to the distributor or to "Dixell S.r.l." (see address) with a detailed description of the fault.
- Consider the maximum current which can be applied to each relay (see Technical Data).
- Ensure that the wires for probes, loads and the power supply are separated and far enough from each other, without crossing or intertwining.
- In case of applications in industrial environments, the use of mains filters (our mod. FT1) in
 parallel with inductive loads could be useful.

2 GENERAL DESCRIPTION

Model XW60K is microprocessor based controller suitable for applications on medium or low temperature refrigerating units. It has to be connected by means of a two-wire cable (\oslash 1mm) at a distance of up to 10 meters to the keyboard T620T or T620 or V620 or CX620. It is provided with four relay outputs to control compressor, defrost - which can be either electrical or hot gas - the evaporator fans and light. It is also provided with 4 NTC or PTC probe inputs, one for temperature control, one to control the defrost end temperature of the evaporator and the third and fourth to control condenser temperature.

The HOT KEY output allows to connect the unit, by means of the external module XJ485-CX, to a network line **ModBUS-RTU** compatible such as the Dixell monitoring units of X-WEB family. It allows to program the controller by means the HOT KEY programming keyboard.

The instrument is fully configurable through special parameters that can be easily programmed through the keyboard.

3 CONTROLLING LOADS

3.1 THE COMPRESSOR

The regulation is performed according to the temperature measured by the thermostat probe with a positive differential from the set point: if the temperature increases and reaches set point plus differential the compressor is started and then turned off when the temperature reaches the set point value again.

In case of fault in the thermostat probe the start and stop of the compressor are timed through parameters Con and CoF.

The relay of the second compressor is activated in parallel with the relay of the first compressor, with a possible delay set in the **AC1** parameter. Both the compressors are switched off at the same time.

3.2 FAST FREEZING

When defrost is not in progress, it can be activated by holding the **UP** key pressed for about 3 sec. The compressor operates to maintain the **CCS** set point for the time set through the **CCt** parameter. The cycle can be terminated before the end of the set time using the same activation key **UP** for 3 sec.

3.3 DEFROST

Two defrost modes are available through the tdF parameter: defrost through electrical heater (tdF = EL) and hot gas defrost (tdF = in).

The defrost interval depends on the presence of the RTC (optional). If the RTC is present is controlled by means of parameter EdF:

EdF=in: a defrost starts after elapsing the idF time (standard way for controller without RTC).

EdF=rtC: defrosts are scheduled by using a real time clock system, depending on the hours set in the parameters Ld1..Ld6, during workdays, and in Sd1...Sd6 during holidays.

Other parameters are used to control defrost cycles: its maximum length (MdF) and two defrost modes: timed or controlled by the evaporator's probe (P2P).

At the end of defrost dripping time is started, its length is set in the Fdt parameter. With Fdt=0 the dripping time is disabled.

3.4 CONTROL OF EVAPORATOR FANS

The fan control mode is selected by means of the **FnC** parameter: $\mathbf{Fn}^{2} = \mathbf{2}$ as force will write ON and OFF with the control parameters of a force of the force of t

- FnC = C_n: fans will switch ON and OFF with the compressor and not run during defrost; FnC = o_n fans will run even if the compressor is off, and not run during defrost;
- After defrost, there is a timed fan delay allowing for drip time, set by means of the Fnd parameter.
- FnC = C_Y fans will switch ON and OFF with the compressor and run during defrost;
- **FnC = o_Y** fans will run continuously also during defrost.

An additional parameter **FSt** provides the setting of temperature, detected by the evaporator probe, above which the fans are always OFF. This is used to make sure circulation of air only if his temperature is lower than set in **FSt**.

3.4.1 Forced activation for fans

This function, managed by the FCt parameter, is designed to avoid short cycles of fans, that could happen when the controller is switched on or after a defrost, when the room air warms the evaporator. If the difference between the evaporator temperature and the room temperature is higher than the FCt value, the controller will activate the fans. This function is disabled if FCt=0.

3.4.2 Timed activation of the fans when the compressor is off.

When FnC=C-n or C-Y (fans in parallel to the compressor), the fans will be able to carry out on and off cycles even if the compressor is switched off. The on and off interval of time follow the Fon and FoF parameters. When the compressor is stopped the fans will go on working for the Fon time. On the other side, with Fon=0 the fans will stay always off when the compressor is off.

4 SPECIAL FUNCTIONS

By means of the parameter **oA3**, it's possible to configure the functions of the light relay (22-23), as described in the following paragraphs:

4.1 LIGHT RELAY (FACTORY SETTING, OA3 = LIG)

By setting **oA3=Lig** the relay will work as light relay, it is switched on and off by the light button on the keyboard and is affected by status of the digital input when **i1F=dor**.

4.2 SECOND COMPRESSOR MANAGEMENT (OA3 = CP2)

By setting **oA3=CP2**, the relay at terminals 22-23 will operate as "second compressor". It will be activated in parallel with the relay of the first compressor, with a possible delay set in the **AC1** parameter (seconds). Both the compressors are switched off at the same time.

4.3 ON -OFF RELAY (OA3 = ONF)

By setting **oA3=onF**, the relay will operate as "on-off" relay: it will be activated when the controller is switched on and it will be switched off when the controller is in stand-by status.

4.4 AUXILIARY RELAY (OA3 = AUS)

By setting oA3=AUS, the relay 22-23 will work as auxiliary thermostat (ex. anti condensing heater). Parameters involved:

- ACH (cL, Ht): Kind of regulation for the auxiliary relay: Ht = heating / CL = cooling;
- SAA (-50÷150) Set point for auxiliary relay
- SHy (0÷25.5°C) Differential for auxiliary output.
 - With ACH = CL: aux relay cut in is SAA+SHy, cut out SAA.
 - With ACH = Ht: aux relay cut in is SAA-SHy, cut out SAA. ArP (nP, P1, P2, P3, P4) Probe for auxiliary relay
- Air (iir, F1, F2, F3, F4) Flobe for auxiliary feray
 Sdd (n, Y) Auxiliary output working during defrost

4.5 ALARM RELAY (OA3 = ALR)

By setting oA3=ALr the relay will work as alarm relay, it is switched on when an alarm happens. Parameters involved:

- tbA (n, y) Alarm relay silencing
- AoP (cL; oP) Alarm relay polarity

4.6 NEUTRAL ZONE (OA3 = DB)

By setting **oA3=db** the controller will perform a "neutral zone" regulation. The heating element has to be connected to the

or A3 relay (22-23) If the temperature increases and reaches set point plus differential (HY) the **compressor** is started and then turned off when the temperature reaches the set point value again. If the temperature decreases and reaches the set point minus differential (HY) the oA3 output (heater) is switched on and then turned OFF

when the temperature reaches again the set point.

5 KEYBOARDS

Installing and operating instructions

To display and modify target set point; in programming mode it selects a parameter or confirm an operation. By holding it pressed for 3 sec when max or min temperature is displayed it will be erased.

(UP) To see the max stored temperature; in programming mode it browses the parameter codes or increases the displayed value. By holding it pressed for 3s the fast freezing cycle is started.

 (\mbox{DOWN}) To see the min stored temperature; in programming mode it browses the parameter codes or decreases the displayed value.

(LIG) Switch ON and OFF the cold room light.

(ONOFF) Switch ON and OFF the instrument.

(DEF) By holding it pressed for 3 sec the defrost is started.

KEY COMBINATIONS

To lock and unlock the keyboard.

To enter the programming mode.

To exit the programming mode.

5.1 USE OF LEDS

all I FD for all and a share of the data following solution

Each LED function is described in the following table.			
LED	MODE	Function	
	ON	The compressor is running	
*	FLASHING	- Programming Phase (flashing with LED 🍫)	
	FLASHING	- Anti-short cycle delay enabled	
	ON	The fan is running	
s.	FLASHING	Programming Phase (flashing with LED 🔆)	
*	ON	The defrost is enabled	
4,7,4	FLASHING	Drip time in progress	
`₩	ON	The Fast Freezing cycle is enabled	
((!))	ON	- ALARM signal - In "Pr2" indicates that the parameter is also present in "Pr1"	
`₩	ON	Continuous cycle is running	
(پ	ON	Energy saving enabled	
ý.	ON	Light on	
AUX	ON	Auxiliary relay on (CX620 only)	
°C/°F	ON	Measurement unit (CX620 only)	

6 AUTOMATIC KEYBOARD LOCK (ONLY FOR T620T)

To avoid accidental modifications of the controller settings, the T620T keyboard will be locked automatically if no key will be touched for 60 seconds. The T620T will show "LoC" flashing for few seconds when it's locking. The light key is operating even if the keyboard is locked.

6.1 TO UNLOCK THE T620T

- Touch any key.
 The keys will be lighted.
- Keep a key pushed for few seconds till the "on" message is displayed.

7 CONTROLLER INTERFACE

SET THE CURRENT TIME AND DAY (ONLY WITH RTC)

When the instrument is switched on, it's necessary to program the time and day.

- Enter the Pr1 programming menu, by pushing the SET+ DOWN keys for 3 sec.
 The rtC parameter is displayed. Push the SET key to enter the real time clock menu.
- The **Hur** (hour) parameter is displayed. Push in
 The **Hur** (hour) parameter is displayed.
- Push the SET and set current hour by the UP and DOWN keys, then push SET to confirm the value.
- Repeat the same operations with Min (minutes), dAy (day), dYM (day of month), Mon (month) and YAr (year) parameters.

To exit: Push both SET+UP keys or wait for 15 sec without pushing any keys.

7.1 HOW TO SEE THE MIN TEMPERATURE

- 1. Press and release the DOWN key.
- 2. The "Lo" message will be displayed followed by the minimum temperature recorded.
- 3. By pressing the **DOWN** key or waiting for 5 sec the normal display will be restored.

7.2 HOW TO SEE THE MAX TEMPERATURE

- 1. Press and release the UP key.
- 2. The "Hi" message will be displayed followed by the maximum temperature recorded
- 3. By pressing the UP key or waiting for 5 sec the normal display will be restored.

7.3 HOW TO RESET THE MAX AND MIN TEMPERATURE RECORDED

- To reset the stored temperature, when max or min temperature is displayed
- Press SET key until "rST" label starts blinking.

Note: after the installation remember to RESET the temperature stored.

7.4 HOW TO SEE AND MODIFY THE SET POINT

- Push and immediately release the SET key: the display will show the Set point value;
 To change the SEt value, push the UP or DOWN arrows within 10 sec.
- To memorise the new set point value push the SET key again or wait for 10 sec.

7.5 TO START A MANUAL DEFROST

1. Push the DEF key for more than 2 sec and a manual defrost will	start.
--	--------

7.6 TO ENTER IN PARAMETERS LIST "PR1"

To enter the parameter list "Pr SET + 7.	1" (user accessible parameters) operate as follows: Enter the Programming mode by pressing the Set and DOWN ke for few seconds (s and * start blinking).
2.	The instrument will show the first parameter present in "Pr1"

7.7 THE HIDDEN MENU

In the hidden menu there are all the parameters of the instrument.

7.7.1 ENTERING THE HIDDEN MENU

- Enter the Programming mode by pressing the SET+DOWN keys for 3 sec (the "°C" or "°F" LED will start blinking).
- Release the keys and then push again the SET+DOWN keys more than 7 sec. The "Pr2" label will be displayed immediately, followed from the HY parameter.

NOW THE HIDDEN MENU IS DISPLAYED

- 3. Select the required parameter.
- Press SET key to display its actual value
 Use UP or DOWN keys to change its value
- Use UP or DOWN keys to change its value.
 Press SET to store the new value and move to the following parameter.

To exit: Press SET+UP or wait for 15 sec without pressing any key.

NOTE1: if no parameter is present in the "Pr1" level, after the first 3 sec the "noP" message will be displayed. Keep SET+DOWN keys pushed till the "Pr2" message will be displayed.

NOTE2: the new set value will be stored even if the procedure is exited by waiting for the time-out to expire.

7.7.2 HOW TO: MOVE A PARAMETER FROM THE HIDDEN MENU TO THE FIRST LEVEL AND VICEVERSA.

Each parameter present in the HIDDEN MENU can be moved or put into "THE FIRST LEVEL" (user level) by pressing **SET+DOWN** keys. In HIDDEN MENU, if a parameter is present also in the First Level (Pr1), the decimal point will be lit.

7.7.3 HOW TO CHANGE THE PARAMETER VALUE

- 1. Enter the Programming mode.
- 2. Select the required parameter with UP or DOWN.
- 3. Press the "SET" key to display its value (🗱 and 🐝 LED starts blinking).
- 4. Use UP or DOWN to change its value.
- 5. Press SET to store the new value and move to the following parameter.
- To exit: Press SET+UP or wait for 15 sec without pressing any key.

NOTE: the new programming is stored even when the procedure is exited by waiting the time-out.

Dixell

Installing and operating instructions

7.8 HOW TO LOCK THE KEYBOARD (MANUALLY)

- Keep the UP and DOWN keys pressed together for more than 3 sec the UP and DOWN keys.
 The "PoF" message will be displayed and the keyboard is locked. At this point it is
- ≯ +
- The "PoF" message will be displayed and the keyboard is locked. At this point it is only possible the viewing of the set point or the MAX o Min temperature stored and to switch ON and OFF the light, the auxiliary output and the instrument.
- TO UNLOCK THE KEYBOARD

Keep the UP and DOWN keys pressed together for more than 3 sec.

7.9 ON/OFF FUNCTION (STAND BY)

By pushing the **ON/OFF** key, the instrument shows "OFF" for 5 sec. and the ON/OFF LED is switched ON.

During the OFF status, all the relays are switched OFF and the regulations are stopped; if a monitoring system is connected, it does not record the instrument data and alarms. When the instrument is in stand by the keyboard displays "oFF".

N.B. During the OFF status the Light and AUX buttons are active.

7.10 TO SEE THE PROBE VALUES

1. Enter in "Pr1" level.

2. Parameters "dP1", "dP2", "dP3" and "dP4" display the value of probes 1, 2, 3 and 4.

8 PARAMETER LIST

rtC Real time clock menu (only for controller with RTC): to set the time, date and defrost start time.

REGULATION

CEGULA	TION	
HY	Differential: (0.1 to 25.5°C; 1 to 45°F) intervention differential for set point. Compressor Cut IN is Set Point + differential (HY). Compressor Cut OUT is when the temperature	
	reaches the set point.	
LS	Minimum set point: (-55°C to SET; -67°F to SET) sets the minimum value for the set point.	
US	Maximum set point: (SET to 150°C; SET to 302°F) set the maximum value for set point.	
ot	Thermostat probe calibration: (-12.0 to 12.0°C, -21 to 21°F) allows to adjust possible offset of the thermostat probe.	
P2P	Evaporator probe presence: (n; Y) n = not present, the defrost stops by time; Y = present, the defrost stops by temperature.	
οE	Evaporator probe calibration: (-12.0 to 12.0°C; -21 to 21°F) allows to adjust possible offset of the evaporator probe.	
P3P	Third probe presence (P3): (n; Y) $n = not$ present, the terminals 18-20 operate as digital input; Y = present, the terminals 18-20 operate as third probe.	
о3	Third probe calibration (P3): (-12.0 to 12.0°C; -21 to 21°F) allows to adjust possible offset of the third probe.	
P4P	Fourth probe presence: (n; Y) n = Not present; Y = present. NOTE: only for XW60LT models.	
o4	Fourth probe calibration: (-12.0 to 12.0°C; -21 to 21°F) allows to adjust possible offset of the fourth probe. NOTE: only for XW60LT models.	
odS	Outputs activation delay at start up: (0 to 255min) this function is enabled at the initial start up of the instrument and inhibits any output activation for the period of time set in the parameter.	
AC	Anti-short cycle delay: (0 to 50min) minimum interval between the compressor stop and the following restart.	
rtr	Percentage of the second and first probe for regulation: (0 to 100; 100=P1, 0=P2) it allows to set the regulation according to the percentage of the first and second probe, as for the following formula (rtr(P1-P2)/100 + P2).	
CCt	Compressor ON time during continuous cycle: (0.0 to 24h00min, res. 10min) allows to set the length of the continuous cycle. Compressor stays on without interruption during CCt time. This is useful, for instance, when the room is filled with new products.	
CCS	Set point for continuous cycle: (-55 to 150°C; -67 to 302°F) it sets the set point used during the continuous cycle.	
Con	Compressor ON time with faulty probe: (0 to 255min) time during which the compressor is active in case of faulty thermostat probe. With Con=0 compressor is always OFF.	
CoF	Compressor OFF time with faulty probe: (0 to 255min) time during which the compressor is OFF in case of faulty thermostat probe. With CoF=0 compressor is always active.	
DISPLAY		
CF	Temperature measurement unit: (°C; °F) °C = Celsius; °F = Fahrenheit. WARNING: When the measurement unit is changed the SET point and the values of the parameters HY, LS, US, ot, ALU and ALL have to be checked and modified (if necessary).	
rES	Resolution (for °C): (in=1°C; dE=0.1°C) allows decimal point display.	
Lod	Instrument display: (P1; P2, P3, P4, SET, dtr) it selects which probe is displayed by the instrument. P1 = Thermostat probe; P2 = Evaporator probe; P3 = Third probe (only for model with this option enabled); P4 = Fourth probe, SET = set point; dtr = percentage of visualization.	

 rEd
 X-REP display (optional): (P1; P2, P3, P4, SET, dtr) it selects which probe is displayed by X- REP. P1 = Thermostat probe; P2 = Evaporator probe; P3 = Third probe (only for model with this option enabled); P4 = Fourth probe, SET = set point; dtr = percentage of visualization.

 dLY
 Display delay: (0 to 20min00s; res. 10s) when the temperature increases, the display is updated of 1°C or 1°F after this time.

 dtr
 Percentage of the second and first probe for visualization when Lod=dtr: (0 to 99)

 dtr
 Percentage of the second and first probe for visualization when Lod=dtr: (0 to 99; 100=P1, 0=P2) if Lod=dtr it allows to set the visualization according to the percentage of the first and second probe, as for the following formula (dtr(P1-P2)/100 + P2).

DEFROST		
EdF	Defrost mode (only for controller with RTC):	
	- rtC: Real Time Clock mode. Defrost time follows Ld1 to Ld6 parameters on	
	workdays and Sd1 to Sd6 on holidays.	
	- in: interval mode. The defrost starts when the time idf is expired.	
tdF	Defrost type: (EL; in) EL = electrical heater; in = hot gas.	
dFP	Probe selection for defrost termination: (nP; P1; P2; P3; P4) nP = no probe;	
	P1 =thermostat probe; P2 = evaporator probe; P3 =configurable probe; P4 = Probe on	
	Hot Key plug.	
dtE	Defrost termination temperature: (-55 to 50°C; -67 to 122°F) (enabled only when EdF=Pb) sets the temperature measured by the evaporator probe, which causes the	
	end of defrost.	
idF	Interval between defrost cycles: (0 to 120hours) determines the interval of time	
	between two defrost cycles.	
MdF	(Maximum) length for defrost: (0 to 255min) when P2P=n, (not evaporator probe:	
	timed defrost) it sets the defrost duration. When P2P=Y (defrost end based on	
10.1	temperature) it sets the maximum length for defrost.	
dSd	Start defrost delay: (0 to 99min) this is useful when different defrost start times are necessary to avoid overloading the plant.	
dFd	Temperature displayed during defrost: (rt; it; SEt; dEF) rt = real temperature;	
uiu	it = temperature at defrost start; SEt = set point; dEF = "dEF" label.	
dAd	MAX display delay after defrost: (0 to 255min) sets the maximum time between the	
	end of defrost and the restarting of the real room temperature display.	
Fdt	Drip time: (0 to 120min) time interval between reaching defrost termination temperature	
	and the restoring of the control's normal operation. This time allows the evaporator to	
-0-	eliminate water drops that might have formed due to defrost.	
dPo dAF	First defrost after start-up: (n; Y) n = after the idF time, Y = immediately. Defrost delay after continuous cycle: (0.0 to 24h00min, res. 10min) time interval	
UAF	between the end of the fast freezing cycle and the following defrost related to it.	
54110		
FANS		
FnC	Fans operating mode: (C-n; o-n; C-Y; o-Y) C-n = runs with the compressor, OFF during	
	defrost; o-n = continuous mode, OFF during defrost; C-Y = runs with the compressor, ON	
	during defrost; o-Y = continuous mode, ON during defrost.	
Fnd	Fans delay after defrost: (0 to 255min) interval between end of defrost and evaporator fans start.	
FCt	Temperature differential to avoid fan short cycles: (0 to 59°C; 0 to 90°F) (N.B.: FCt=0	
100	means function disabled) if the difference of temperature between the evaporator and the	
	room probes is higher than FCt value, the fans will be switched on.	
FSt	Fans stop temperature: (-55 to 50°C; -67 to 122°F) setting of temperature, detected by	
	evaporator probe, above which fans are always OFF.	
Fon	Fan ON time: (0 to 15min) with Fnc=C_n or C_Y, (fan activated in parallel with	
	compressor) it sets the evaporator fan ON cycling time when the compressor is off. With Fon=0 and FoF≠0 the fan are always off, with Fon=0 and FoF=0 the fan are always off.	
FoF	Fan OFF time: (0 to 15min)	
	With FnC=C_n or C_Y, (fan activated in parallel with compressor) it sets the evaporator	
	fan off cycling time when the compressor is off.	
	With Fon=0 and FoF≠0 the fan are always off, with Fon=0 and FoF=0 the fan are always	
FAP	Off. Proho coloction for fan management: (nP: D1: P2: D3: D4) nP - no proho:	
	 Probe selection for fan management: (nP; P1; P2; P3; P4) nP = no probe; P1 = thermostat probe; P2 = evaporator probe; P3 = configurable probe; P4 = Probe on Hot 	
	Key plug.	
0A3 = AU	IS: AUXILIARY THERMOSTAT CONFIGURATION (terms. 22-23)	
ACH	Kind of regulation for auxiliary relay: (Ht; CL) Ht = heating; CL = cooling.	
SAA	Set Point for auxiliary relay: (-55.0 to 150.0°C; -67 to 302°F) it defines the room temperature set point to switch auxiliary relay.	
SHY	Differential for auxiliary output: (0.1 to 25.5°C; 1 to 45°F) intervention differential for	
	auxiliary output set point.	
	ACH=CL, AUX Cut in is [SAA+SHY]; AUX Cut out is SAA.	
	ACH=Ht, AUX Cut in is [SAA–SHY]; AUX Cut out is SAA.	
ArP	Probe selection for auxiliary: (nP; P1; P2; P3; P4) nP = no probe, the auxiliary relay is	
	switched only by the digital input; P1 = Probe 1 (Thermostat probe); P2 = Probe 2 (evaporator probe); P3 = Probe 3 (display probe); P4 = Probe 4.	
Sdd	Auxiliary relay off during defrost: (n: Y) n = the auxiliary relay operates during defrost.	
	\mathbf{Y} = the auxiliary relay is switched off during defrost.	
ALARMS	· · · ·	
ALP	Probe selection for alarm: (nP; P1; P2; P3; P4) nP = no probe, the temperature alarms	
	are disabled; P1 = Probe 1 (Thermostat probe); P2 = Probe 2 (evaporator probe);	
ALC	P3 = Probe 3 (display probe); P4 = Fourth probe. Temperature alarms configuration: (Ab; rE) Ab = absolute temperature, alarm	
ALC	temperature alarms configuration: (AD; rE) AD = absolute temperature, alarm temperature is given by the ALL or ALU values. rE = temperature alarms are referred to	
	the set point. Temperature alarm is enabled when the temperature exceeds the	
	[SET+ALU] or [SET-ALL] values.	
ALU	MAXIMUM temperature alarm:	
	 If ALC=Ab: [ALL to 150.0°C or ALL to 302°F] 	
	 If ALC=rE: [0.0 to 50.0°C or 0 to 90°F] 	
	when this temperature is reached the alarm is enabled, after the ALd delay time.	
ALL	Minimum temperature alarm: If ALC=Ab: [-55°C to ALU; -67 to ALU]	

- If ALC=Ab: [-55°C to ALU; -67 to ALU]
 If ALC=rE: [0.0 to 50.0°C or 0 to 90°F]
- If ALC=rE: [0.0 to 50.0 °C or 0 to 90 °F]
 when this temperature is reached the alarm is enabled, after the ALd delay time.
- AFH Differential for temperature alarm recovery: (0.1 to 25.5°C; 1 to 45°F) intervention differential for recovery of temperature alarm.
- ALd Temperature alarm delay: (0 to 255 min) time interval between the detection of an alarm condition and alarm signalling.
- dAo Exclusion of temperature alarm at start-up: (0.0 to 24h00min, res. 10min) time interval between the detection of the temperature alarm condition after instrument power on and alarm signalling.

EMERSON

structions

CONDENSER	TEMPERATURE ALARM

AP2 Probe selection for temperature alarm of condenser: (nP; P1; P2; P3; P4) nP = no probe; P1 = thermostal probe; P2 = evaporator probe; P3 = configurable probe; P4 = Probe on Hot Key plig. A12 Low temperature alarm of condenser: (-55 to 150°C; -67 to 302°F) when this temperature is reached the LA2 alarm is signalled, possibly after the Ad2 delay. A12 High temperature alarm of condenser: (-55 to 150°C; -67 to 302°F) when this temperature is reached the LA2 alarm is signalled, possibly after the Ad2 delay. A12 Differential for temperature condenser alarm recovers; 0.1 to 25.7°C; 10 4.5°F. A2 Condenser temperature alarm and elay; 0(to 255 min) time interval between the detection of the condenser alarm condition and alarm signalling. A2 Condenser temperature alarm exclusion at start up: 0.0 to 24h00min, res. 10min. bLL Compressor off with low temperature alarm of condenser: (n; Y) n = compressor keeps on working; Y = compressor is switched off till the alarm is present, in any case regulation restarts after AC time at minimum. A2 Conferest alare: AC time at minimum. 	HES		
		sets the increasing value of the set point [SET+HES] during the Energy Saving cycle.	
		NT TIME AND WEEKLY HOLIDAYS (ONLY FOR MODELS WITH RTC)	- I

Hur	Current hour: 0 to 23h.	
Min	Current minute: 0 to 59min.	
dAY	Current day: Sun to SAt.	
dYM	Day of the month: 1 to 31.	
Mon	Month: 1 to 12.	
YAr	Year: 00 to 99.	
Hd1	First weekly holiday: (Sun to nu) set the first day of the week which follows the holiday times.	
Hd2	Second weekly holiday: (Sun to nu) set the second day of the week which follows the holiday times.	
N.B.: Hd	1, Hd2 can be set also as "nu" value (Not Used).	
ENERG	SAVING TIMES (ONLY FOR MODELS WITH RTC)	
ILE	Energy Saving cycle start during workdays: (0 to 23h50min) during the Energy Saving cycle the set point is increased by the value in HES so that the operation set point is SET+HES.	
dLE	Energy Saving cycle length during workdays: (0 to 24h00min) sets the duration of the Energy Saving cycle on workdays.	
ISE	Energy Saving cycle start on holidays: 0 to 23h50min.	
dSE	Energy Saving cycle length on holidays: 0 to 24h00min.	
TO SET	DEFROST TIMES (ONLY FOR MODELS WITH RTC)	
Ld1l	.d6 Workday defrost start: (0 to 23h50min) these parameters set the beginning of the 6 programmable defrost cycles during workdays. Ex: when Ld2=12.4 the second defrost starts at 12.40 during workdays.	
Sd18		

OTHER

Serial address: (1 to 247) identifies the instrument address when connected to a Adr ModBUS compatible monitoring system.

EMERSON

bC	Type of probe: (PtC; ntC) it allows to set the kind of probe used by the instrument: PtC = PTC probe; ntC = NTC probe.
nF	On/Off key enabling: (nU; oFF; ES) nU = disabled; oFF = enabled; ES = not set it.
IP1	Thermostat probe display.
IP2	Evaporator probe display.
IP3	Third probe display.
IP4	Fourth probe display (only for XW60LT models).
SE	Real set point: it shows the set point used during the energy saving cycle or during the continuous cycle.

- rFI Software release for internal use.
- Ptb Parameter table code: readable only

DIGITAL INPUT

ne free voltage digital input is programmable in different configurations by the i1F parameter.

1 DOOR SWITCH INPUT (I1F = DOR)

signals the door status and the corresponding relay output status through the odC parameter: no = ormal (any change); Fan = Fan OFF; CPr = Compressor OFF; F_C = Compressor and fan OFF. nce the door is opened, after the delay time set through parameter did, the door alarm is enabled, e display shows the message "dA" and the regulation restarts is rtr = yES. The alarm stops as oon as the external digital input is disabled again. With the door open, the high and low temperature arms are disabled.

2 GENERIC ALARM (I1F = EAL)

s soon as the digital input is activated the unit will wait for **did** time delay before signalling the "EAL" arm message. The outputs status doesn't change. The alarm stops just after the digital input is dectivated

SERIOUS ALARM MODE (I1F = BAL) 3

hen the digital input is activated, the unit will wait for did delay before signalling the "CA" alarm essage. The relay outputs are switched OFF. The alarm will stop as soon as the digital input is dectivated

4 PRESSURE SWITCH (I1F = PAL)

during the interval time set by did parameter, the pressure switch has reached the number of ctivation of the nPS parameter, the "CA" pressure alarm message will be displayed. The compressor nd the regulation are stopped. When the digital input is ON the compressor is always OFF. If the PS activation in the did time is reached, switch off and on the instrument to restart normal gulation.

5 AUXILIARY OUTPUT SWITCHING (I1F = AUS)

ith oA3=AUS and i1F=AUX it switches the fourth relay (22-23)

.6 START DEFROST (I1F = DFR)

starts a defrost if there are the right conditions. After the defrost is finished, the normal regulation will start only if the digital input is disabled otherwise the instrument will wait until the MdF safety time is pired

7 KIND OF ACTION: HEATING OR COOLING (I1F = HTR)

his function allows to invert the regulation of the controller: from cooling to heating and viceversa.

8 ENERGY SAVING (I1F = ES)

ne Energy Saving function allows to change the set point value as the result of the SET+HES arameter) sum. This function is enabled until the digital input is activated.

9.9 DIGITAL INPUTS POLARITY

The digital input polarity depends on the i1P parameter: i1P=CL: the input is activated by closing the contact. i1P=OP: the input is activated by opening the contact

INSTALLATION AND MOUNTING

T620 keyboard shall be mounted on vertical panel, in a 150x31 mm hole, and fixed using two screws Ø 3 x 2mm. To obtain an IP65 protection grade use the front panel rubber gasket (mod. RG-L). V620 keyboard shall be mounted on vertical panel, in a 72x56 mm hole, and fixed using two screws Ø

3 x 2mm. To obtain an IP65 protection grade use the front panel rubber gasket (mod. RG-V) CX620 keyboard shall be mounted on vertical panel, in a 29x71 mm hole, and fixed using the special bracket supplied.

The controller XW60K shall be mounted in a din rail

It must be connected to the keyboard by means of a two-wire cable (Ø 1mm). The temperature range allowed for correct operation is 0 to 60°C. Avoid places subject to strong vibrations, corrosive gases, excessive dirt or humidity. The same recommendations apply to probes. Let the air circulate by the cooling holes.

Dixell

Installing and operating instructions

10.1 XW60K - 8 DIN CASE - DIMENSIONS

11 ELECTRICAL CONNECTIONS

XW60K is provided with screw terminal blocks to connect cables with a cross section up to 2.5 mm² for the RS485 (optional) and the keyboard. To connect the other inputs, power supply and relays, XW60K is provided with Faston connections (6.3mm). Heat-resistant cables have to be used. Before connecting cables make sure the power supply complies with the instrument's requirements. Separate the probe cables from the power supply cables, from the outputs and the power connections. Do not exceed the maximum current allowed on each relay, in case of heavier loads use a suitable external relay.

NOTE: the maximum current allowed for all the loads is 20A.

11.1 PROBE CONNECTIONS

The probes shall be mounted with the bulb upwards to prevent damages due to casual liquid infiltration. It is recommended to place the thermostat probe away from air streams to correctly measure the average room temperature. Place the defrost termination probe among the evaporator fins in the coldest place, where most ice is formed, far from heaters or from the warmest place during defrost, to prevent premature defrost termination.

12 TTL/RS485 SERIAL LINE

The TTL connector allows, by means of the external module TTL/RS485 (XJ485CX), to connect the unit to a network line ModBUS-RTU compatible as the Dixell monitoring system. The same TTL connector is used to upload and download the parameter list of the "HOT-KEY".

13 HOW TO: USE OF THE PROGRAMMING "HOT KEY"

13.1 PROGRAM A HOT-KEY FROM AN INSTRUMENT (UPLOAD)

- 1. Program one controller with the front keypad.
- When the controller is <u>ON</u>, insert the "HOT-KEY" and push UP button; the "uPL" message appears followed a by a flashing "End" label.
- 3. Push **SET** button and the "**End**" will stop flashing.
- 4. <u>Turn OFF</u> the instrument, remove the "HOT-KEY" and then turn it ON again.

NOTE: the "Err" message appears in case of a failed programming operation. In this case push again button if you want to restart the upload again or remove the "HOT-KEY" to abort the operation.

13.2 PROGRAM AN INSTRUMENT BY USING A HOT-KEY (DOWNLOAD)

1. Turn OFF the instrument.

- Insert a pre-programmed "HOT-KEY" into the 5-PIN receptacle and then turn the Controller ON.
- The parameter list of the "HOT-KEY" will be automatically downloaded into the Controller memory. The "doL" message will blink followed a by a flashing "End" label.
- 4. After 10 seconds the instrument will restart working with the new parameters.
- 5. Remove the "HOT-KEY".

NOTE: the message "Err" is displayed for failed programming. In this case turn the unit off and then on if you want to restart the download again or remove the "HOT-KEY" to abort the operation.

14 ALARM SIGNALS

Message	Cause	Outputs
P1	Thermostat probe failure	Alarm output ON; Compressor output according to parameters Con and CoF .
P2	Evaporator probe failure	Alarm output ON; Other outputs unchanged
P3	Probe 3 probe failure	Alarm output ON; Other outputs unchanged
P4	Probe 4 probe failure	Alarm output ON; Other outputs unchanged
HA	Maximum temperature alarm	Alarm output ON; Other outputs unchanged
LA	Minimum temperature alarm	Alarm output ON; Other outputs unchanged
HA2	Condenser high temperature	It depends on the AC2 parameter
LA2	Condenser low temperature	It depends on the bLL parameter
dA	Door open	Compressor and fans restarts
EA	External alarm	Output unchanged.
CA	Serious external alarm (i1F=bAL)	All outputs OFF.
CA	Pressure switch alarm (i1F=PAL)	All outputs OFF
EE	Data or memory failure	Alarm output ON; Other outputs unchanged

The alarm message is displayed until the alarm condition is recovery.

All the alarm messages are showed alternating with the room temperature except for the "P1" which is flashing.

To reset the "EE" alarm and restart the normal functioning press any key, the " \mathbf{rSt} " message is displayed for about 3 sec.

14.1 SILENCING BUZZER

Once the alarm signal is detected the buzzer can be silenced by pressing any key. Buzzer is mounted in the keyboard and it is an option.

14.2 "EE" ALARM

The Dixell instruments are provided with an internal check for the data integrity. The "EE" alarm flashes when a failure in the memory data occurs. In such cases the alarm output is enabled.

14.3 ALARM RECOVERY

Probe alarms: "P1" (probe1 faulty), "P2", "P3" and "P4"; they automatically stop 10 sec after the probe restarts normal operation. Check connections before replacing the probe.

Temperature alarms "HA", "LA" "HA2" and "LA2" automatically stop as soon as the temperature returns to normal values.

Alarms "EA" and "CA" (with i1F=bAL) recover as soon as the digital input is disabled. Alarm "CA" (with i1F=PAL) recovers only by switching off and on the instrument.

Keyboards

Housing: self extinguishing ABS

Case: T620 and T620T: facia 38x185 mm; depth 23mm

V620: facia 72x56 mm; depth 23mm CX620: facia 75x36 mm; depth 23mm

- Mounting: T620T panel mounting in a 150x31 mm panel cut-out with the 2 metal brackets supplied.
 T620: panel mounting in a 150x31 mm panel cut-out with two screws. Ø 3 x 2mm. Distance between the holes 165mm
 - V620: panel mounting in a 56x72 mm panel cut-out with two screws. \oslash 3x2mm. Distance between the holes 40mm

CX620: panel mounting in a 71x29mm panel cut-out Protection: IP20; Frontal protection: IP65 with frontal gasket

Connections: Screw terminal block $\leq 2.5 \text{ mm}^2$

Power supply: from XW60K power module

Display: 3 digits, red LED, 14.2 mm high

Optional output: buzzer.

Power module XW60K Case: 8 DN: 140X176X148

Connections: Screw terminal block $\leq 2.5 \mbox{ mm}^2$ heat-resistant wiring and 6.3mm Faston Power supply: 230Vac or. 110Vac \pm 10% or 24Vac Power absorption: 10VA max Inputs: 4 NTC or PTC probes Digital inputs: 1 free voltage Relay outputs: Total current on loads MAX. 20A Compressor: relay SPST 20(8) A, 250Vac; EN60730: 100K cycles Fan: relay SPST 8(3) A, 250Vac Defrost: relay SPST 16(5) A, 250Vac Light (oA3): relay SPST 16(5) A, 250Vac Serial output: TTL standard Communication protocol: Modbus - RTU Data storing: on the non-volatile memory (EEPROM) Kind of action: 1B Pollution degree: normal Software class: A Operating temperature: 0 to 60°C (32 to 140°F) Storage temperature: -25 to 60°C (-13 to 140°F) Relative humidity: 20 to 85% (no condensing) Measuring and regulation range: NTC probe: -40 to 110°C (-58 to 230°F) PTC probe: -50 to 150°C (-58 to 302°F) Resolution: 0.1°C or 1°C or 1°F (selectable) Accuracy (ambient temp. 25°C): ±0.5°C ±1 digit
